Dear Fellow Forex Traders,

Thank you for choosing to download this special report revealing one powerful forex trading system which I name it the “ **Forex Pips Chaser** “.

My name is **Aaron Tan**, currently residing in sunny Singapore as well...

I have been making a full time income trading Forex from home for about 3.5 years since I quitted my day job.

Not only has Forex trading enables me to live the ‘dream’ life I always wanted...

And also allow me to spend more quality time with my love ones too...

No longer do I need to be in the office from 8am - 6pm (or sometimes till 9pm for OT) anymore.

One of the best thing I enjoy... is that I do not even have to wake up **earlier than 10am** now.

PS: I definitely love to wake up ” Naturally “....do you ? :-)

I have been sharing this lucrative Forex trading business with all my close friends as well as relatives too.

Some of them are also making a nice additional stream of ” passive” income by trading the forex market with just 1-2 hours daily now.

Forex trading can be **really profitable** and help you rake in good profits (**\$3000 - \$5000 or more**) end of the month ONLY if you know how to trade this super volatile market.

As a matter of fact, any financial tool that can help you make good profits CAN ALSO make you lose quite a fair bit too....*in a short time*.

Double edge sword indeed...!

Since you are searching online for either Singapore Forex Courses or Forex Trading Courses In Singapore...

Then I should be right to say that you sort of ALREADY know the **advantage & income potential** of trading Forex too...

Right ? 😊

So here in this Singapore Forex Courses blog of mine....I will be sharing exactly what you want to know.

So what makes me want to set up this Singapore Forex Courses information site ?

Over the past few months....

I have noticed that there are quite a number of new forex courses popping out in Singapore.

Too many choices can be hard to decide for most I believe.....

Also, from what I read on the many forex related forums online – Many people are seeking true reviews about the different forex courses available currently.

Basically..

They also want to know which are the ones that are both reliable and teach proven forex trading methods that truly work and NOT just another hype-up course everywhere.

I have even heard of very extreme complains about a particular forex course in Singapore selling “ Hype-up” claims and even refuse to compensate in anyway although their students are not happy with the course at all.

All these actually made me decide to carry out an in- depth studies & reviews about the different ones in Singapore.

I hope that by providing my updated reviews about the Forex trading courses in Singapore...

Anyone in need of such information (including yourself) can really benefit greatly from it..

And most importantly....

..Cut short the time & efforts while doing your own research both online & offline.

End of the day...

I truly understand that spending thousands of dollars on forex courses in Singapore is really no big deal as you can easily earn the amount back in a month or two by trading forex...

But the most critical factor is that.....the mentor must be good and the system must proven to work !

Which are also the **2 most important factors** I look into... before recommending any forex trading courses in Singapore to anyone.

I must admit that there are times when trading could be stressful but as long as you have a good set of money management rules & proven trading strategy...

You can actually override and transform those stressful factors involved into *enjoyable and "financially" fulfilling moments* for Yourself trading forex.

I truly understand how **stressful** it can be IF you don't know what you're doing which applies to anything in this world especially with any trading game...

That's because in a trading game, WE are trading using our own money....**REAL hard-earned money** from our own pocket...

Definitely it would be stressful when we lose....

But can be really happy too when we win....

These 2 feelings go hand in hand....naturally.

Even if you have completed your forex trading course of your choice in Singapore...

The learning process Does Not just stop there definitely...

It is a life-long learning to continue to fine tune one's trading skills and decision making capability (traders' psychology)..

Therefore, in order to help *you cut short your learning process and to avoid those unnecessary frustrations associated with trading...*

I will also be sharing forex trading strategies, proven tips and even some of my real trades example with you in the days to come..

At times, I will include any helpful & quality forex resources which I think could help you with your forex trading success too.

So do check out for my emails regularly to learn about the forex updates I have for you.

Previously, I would offer this information in the form of an E-Course for Free to my visitors.

And I would include very basic information about forex trading such as :

- What is forex trading about ?
- What moves forex market and the prices ?

- How can anyone make consistent profits from trading forex ?
- What is technical analysis and how to apply to forex trading ?
- And similar basic stuff...

However.....*instead* of educating those that subscribe for the E-Course and make them understand the “ Big Picture “ about Forex Trading more...

I encounter a very undesirable problem in the process.....

(Which I think I should do *something* about it...*Smile*)

These people who actually requested for my E-Course which I took more than 5 days to write.....DO NOT even bother to read through and understand the information that comes in the E-Course.

Instead...

They just keep bombarding my inbox with their questions that should be answered after reading through my E-Course.

(It only shows something end of the day....that is they just don't bother to even read it – Which defeats the purpose of me creating the E-Course end of the day)

Therefore.....after such lessons learnt.. ;-)

I decide to do something more “Constructive “ and Efficient for both my readers and myself.

I decide to exclude those basic forex trading information for my E-course and just include mainly the powerful strategy instead.

And made it into a report that you're reading now.

You may called it *Short & Sweet & Direct To The Point Too....No B. S.*
smile

Ok...

What if you or anyone is just a complete newbie and need to read up the basic Forex Trading Stuff ?

Not to worry here...

Because I have also included a very informative forum for you to learn “ EVERYTHING “ you need about *Basic* forex trading stuff....:-)

Here’s the link :

⇒ <http://www.babypips.com>

Babypips is a very resourceful forex trading website plus forum.

I am sure you would get almost “ ALL “ your questions about forex answered in fact.

Do visit it when you need to ya..

Alright for now...let’s dive into the main method that you can use to nail 150 Pips, 300 Pips, 400 Pips or more shall we ?

With this method, the profits potential can be relatively good (**average of 150 - 800 pips per trade...Proven**) – **Considering it only takes less than 10 minutes to identify the set-up and then simply “ Set & Forget It “.**

If you are using any forex robot to “ scalp” the forex market for small profits...

Then this method would be a very good compliment for your scalping robot as Forex Pips Chaser is not about scalping but rather “ Swing trading “ – By taking advantage of the **Volatility** of the forex market !

Just Like This :

(700+ Pips On This Particular “SELL “ Trade)

For this particular “SELL “ trade on the USD/JPY..

You would have caught the massive movements and nail almost **700+ pips of profits** for this trade upon exit.

These kinds of Pips are highly realistic using this strategy I must say.

Best of all....

You can even use this method **on any currency pair/s you desire...**

However....for this report, I will be using mainly the USD/JPY for all the examples & illustrations below.

But the fundamental and strategy stays the same – And can be use on other currency pairs.

You just have to adjust some of the parameters such as using a different “STOP-LOSS & Take Profits “ for different currency pairs as they have a different daily range.

Some currency pairs are more volatile than the others – As such they have a different so called “ Daily Range Of Pips Movement”...

For this report, I will be solely using the USD/JPY to illustrate this Forex Pips Chaser strategy...

And the daily range of 100 – 120 Pips are only for this USD/JPY too.

So once you get more familiar and competent with this currency pair and would like to use this strategy on a different pair..

You can then explore the individual “ Daily Pips Range “ simply by taking into account the “ average Pips move from the start – end of the trading day (24 hours) “ of the other currency pair you wish to trade.

Then from your conclusion, plan your Stop-Loss & Take Profits accordingly.

Ok...for now, let's focus solely on the USD/JPY for this report.

Read on as I show you how easy it is for you to set up everything from scratch for maximum pips on your own platform!

For a start..

You need to have a meta4 trading platform.

If you don't already have, you can download it for Free here :

<http://www.ibfx.com>

After you downloaded it and set it up properly...

Simply open up the chart of the currency pair you wish to trade using this method.

For this report, I would be using the USDJPY currency pair as I mentioned above.

Next You Need To Select :

- 1) Candle Stick Charts
- 2) Daily Timeframe (D1)

Here's how it looks like after we loaded the chart :

(To load....just go to Window → New Window → Forex → USDJPY)

(Then choose *CandleStick & D1* from the “ Top Menu Bar “)

Having completed that...

I am going to show you how to determine what the Trend is.....

And how to Enter Order, Stop-Loss & Take-Profits accordingly..

Spotting A Down-Trend Using Forex Pips Chaser

Before we can determine the direction of the trend using this strategy...
We need to plot 3 indicators on the chart as follow :

- 20 Exponential Moving Averages (GREEN)

- 50 Exponential Moving Averages (WHITE)

- 200 Exponential Moving Averages (BLUE)

***Apply ALL To “ CLOSE “..*

Upon plotted these 3 moving averages on the chart....

When a “ Down – Trend “ is in place, you should be able to see that :

- 1) **White** Would Be Crossing BELOW The **BLUE**
- 2) **GREEN** Would Be Crossing BELOW Both The **BLUE** & **WHITE**

3 Lines Spacing Out Nicely Like this :

When you can see the 3 respective lines spacing out nicely in this pattern, it shows that a “ Down – Trend “ is in place.

However...in order for this strategy to work, **You cannot just anyhow “ SELL ” at any price You like...**

Because doing that might not get you the maximum profits....

And when You lose...You might lose far too much too..

In order for to achieve a **Higher** *Reward : Risks ratio*...

We are looking to enter during a pull-back period which happen across all currency pairs known as “ **Retracement** ”. (*Down-Trend Taking A Break*)

Here’s an illustration for you :

So in order to do this, we need to have a way to *identify* the “**Retracement**” in order to get ready to enter position...

This is where you need to refer to the chart and the 3 lines plotted on it for the clue...

Like This...:

When the “*Price is sticking near or out of the WHITE Line*” – Such as the set-up you see in the above illustration...

You can then get ready to enter a “SELL” order (since this is a down-trend)...

So how do you enter the “ SELL “ order , Stop-Loss & Take – Profits for best results ?

A picture speaks more than a thousands word anytime...

So here it is - An illustration showing how you *Enter, Set Stop-Loss & Take-Profits* having spotted the ideal set -up :

For the “ SELL “ entry , you should enter once a BEARISH CANDLE has closed (just like in the above picture)...

This marks the “ resuming” of the Down-Trend and the Retracement has completed (On most occasions...)

NOTE: Always remember that in forex trading...there are NO 100% accuracy or FOR-SURE thing....only probabilities.

So most of the high probability set – ups are mostly based on the characteristics of the market itself and we are capitalizing on them.

Like wise for this “ Retracement “...it is just one of the high probability set –up for us to make our entry in order to achieve a good Reward/Risks ratio for our trades.

Having a good Reward/Risks ratio is **very important** in any trading game because it enables us to WIN MORE & LOSE LESS....

And combine with a good money management rules & proven trading strategy, we can realistically end up in PROFITS every single month..

For any trade you are taking in the future on your own...

Always aim for Reward /Risks ratio of at least 1 : 1

(*Note:* Provided that you’re using a forex strategy with **at least 60%** success rate...)

But I personally only go for at least 2 : 1....

Example :

If my Stop- Loss is 100 Pips...

My Take – Profits would be twice that at 200 Pips...

So if out of 10 trades, I only win 6 but lose 4....

$6 \times 200 = 1200$ Pips

$4 \times 100 = 400$ Pips

End of the month

I still make : $1200 - 400 = 800$ Pips (excluding spreads)

Hope you see the power of using a good Reward/Risks ratio from this example.

For this currency pair (USDJPY), the Stop – Loss I think would work best is between 100 – 150 Pips....(since we are trading on a DAILY timeframe)

Anything more than that range...it is not putting the odds on our side.

Again....it is up to you to experiment with different stop-loss and Take-Profits and use what works best for you.

The forex market is always changing as different people come and go (having failed miserably...)

I am sure you have also heard that only 5% of the traders actually make profits end of the day...

The **other 95% would failed** and burst their account and give up thinking that this forex trading thingy is just too risky for them and can't make money at all !

As such...the turnovers are very high for this trading game so the market characteristic also changes accordingly.

After all, the market moves due to sentiment...

And these sentiment are inputs from living humans **like you and me !**

Ok.....now you know.

Back to the USD/JPY discussion..

To my own testings, using a range of 100 – 150 Pips for Stop – loss on this USD/JPY work most of the time for me though....

In fact....I can confidently say that it works 60 – 70% of the time for me !

And it is really good enough for me to smile to the bank every month as long as I am consistent with it.

Don't be afraid to test it, explore more , re-tune it using a DEMO account until you are very confident with this strategy...

End of the day, if you don't test it yourself...

You would never get to know whether does it truly works or-not right !

Next, I am showing you how to trade the “ **Up – Trend** “ using this same strategy...

The rules still hold true....just have to reverse the lines' position accordingly.

Let me show you how below again...

Spotting An “ Up-Trend “ Using Forex Pips Chaser

When an “ **Up – Trend** “ is in place, you should be able to see that :

- **White** Would Be Crossing ABOVE The **BLUE**

- **GREEN** Would Be Crossing ABOVE Both The **BLUE** & **WHITE**

3 Lines Spacing Out Nicely Like this :

When you can see the 3 respective lines spacing out nicely in this pattern, it shows that a “ Up – Trend “ is in place.

Green
 White
 Blue

Again...in order for this strategy to work, **You cannot just anyhow “ BUY ” at any price You like...**

Because doing that might not get you the maximum profits....

And when You lose...You might lose far too much too..

In order for you to achieve a **Higher Reward : Risks ratio...**

We are looking to enter during a pull-back period which happen across all currency pairs known as “ **Retracement** ”. (*Up -Trend Taking A Break*)

To help you visualize better, here's an **Up – Trend “Retracement”** illustration for you :

Again just like in the Down-Trend, we need to have a way to *identify* the “Retracement” in order to get ready to enter position...

This is where you need to refer to the chart and the 3 lines plotted on it for the clue...

Like This...:

When the “ *Price is sticking near or out of the WHITE Line* “ – Such as the set-up you see in the above illustration...

You can then get ready to enter a “ BUY “ order (since this is a up -trend)...

So how do you enter the “ BUY “ order , Stop-Loss & Take – Profits for best results ?

This is how you do it :

For this “BUY” entry , you should enter once a BULLISH CANDLE has closed (just like in the above picture)...

This marks the “ resuming” of the Up -Trend and the Retracement has completed (On most occasions...)

NOTE: Always remember that in forex trading...there are NO 100% accuracy or FOR-SURE thing....only probabilities.

So most of the high probabilities set – ups are mostly based on the characteristics of the market itself and we are capitalizing on them.

Like wise for this “ Retracement “it is just one of the high probability set –up for us to make our entry in order to achieve a **good Reward/Risks ratio** for our trades.

Having a good Reward/Risks ratio is **very important** in any trading game because it enables us to WIN MORE & LOSE LESS....

And combine with a good money management rules & proven trading strategy, we can realistically end up in PROFITS every single month..

For any trade you are taking in the future on your own...

Always aim for Reward /Risks ratio of at least 1 : 1

But I personally only go for at least 2 : 1....

Example :

If my Stop- Loss is 100 Pips...

My Take – Profits would be twice that at 200 Pips...

So if out of 10 trades, I only win 6 but lose 4....

$6 \times 200 = 1200$ Pips

$4 \times 100 = 400$ Pips

End of the month

I still make : $1200 - 400 = 800$ Pips (excluding spreads)

Hope you see the power of using a good Reward/Risks ratio from this example.

For this currency pair, the Stop – Loss I think would work best is between 100 – 150 Pips....(since we are trading on a DAILY timeframe)

Anything more than that range...it is not putting the odds on our side.

Again....it is up to you to experiment with different stop-loss and Take-Profits and use what works best for you.

Alright...so much for the Forex Pips Chaser strategy for you.

I hope that after reading this report, you would by now understand how to properly use this strategy to “ Chase & Nail “ hundred of Pips for yourself upon seeing the ideal Set – Up.

Always remember that although this strategy would not happen daily, but once it comes, you can almost get ready to nail 150, 300, 400 or even more Pips simply by spending *less than 10 minutes of your time*.

Not too bad IF you are confident enough to use this strategy on other 3 or 4 currency pairs available...

Talking about that....do you know there are at least 15 – 20 different currency pairs for you to profit from available by most brokers online ?

I am only showing you an example on just one currency pair USD/JPY here because this pair can be considered a newbie’s pair and easy for anyone to master I think...

Make sure you DEMO trade and practice this Forex Pips Chaser using virtual money first before trading on a live account.

Ok...so much for this strategy & I shall conclude here for now. (Don’t want to make it too long winded...else you might fall asleep !)

Do check your inbox regularly as in the next few days, I would be sending you even more forex trading tips & strategies to cut short your learning curve without needing to go through unnecessary frustrations..!

Till then.....

Wishing You Happy Trading and Nailing Those “ Massive Pips “ !

To Your Forex Success,

Aaron Tan (your trader friend)

<http://www.sgforexcourses.info>
